# About US

We are a leading provider of high-quality Rubber and High-Performance Polyurethane products, proudly serving a wide range of industries across the UAE and the Middle East. Our products are consistently recognized by customers for their quality, reliability, and compatibility with original equipment standards.

In addition to supplying standard parts, we specialize in offering effective alternatives when original materials are unavailable or obsolete, ensuring continued performance and efficiency for our clients' equipment. With our extensive range of Rubber and Polyurethane grades, we recommend the most suitable options to guarantee the right quality, durability, and application fit.

# RUBBER MOLDING

Rubber possesses inherent properties such as excellent tensile and elongation strength, resistance to wear and tear, electrical insulation, and high resilience. These characteristics make it an ideal material for producing high-volume preformed molded products used in a wide range of applications.

Rubber molding is the process of transforming uncured rubber or elastomers into functional, ready-to-use products. Depending on the specific application, rubber products can be manufactured from various elastomers, including EPDM, Natural Rubber, NBR, Neoprene, SBR, Silicone, Viton, and Rubber Sheets & Floor Mats others.

# POLYURETHANE

## STRONG RESILIENT

## VERSATILE POLYMER

Polyurethane shares many similarities with rubber but offers greater versatility than engineered plastics. It can be formulated to produce parts ranging from very soft (as low as 30A Durometer) to extremely hard (up to 75D Durometer). This makes polyurethane an ideal choice for demanding applications where conventional rubber may fail. Highly versatile, polyurethane resins are widely used in the production of industrial components, including molded bearings, coated rollers, and other custom parts. They provide numerous advantages, such as excellent resistance to chemicals, oils, and grease. Additionally, polyurethane is highly durable, offering superior abrasion resistance and strength, making it less prone to tearing or premature wear.

### Features

- Abrasion Resistant
- Oil & Solvent Resistant
- Tear Resistant
- Weather Resistant
- High Tensile Strength
- Durability

# CASTER WHEELS

Caster Wheel was formed to serve asa one-stop caster wheel solution provider for material

## About Caster wheels

handling applications. Driven by a dedication to competitive manufacturing capabilities, Maxwell Casters has quickly grown to become one of the region's most widely trusted supplier of reliable casters. Our product research and development teams work in compliance and conformity with international standards as well as regional statutory and regulatory requirements.
